

Dock Bumper

Easy to install and protect walls from Damage to forklifts and other material handling vehicles

One-piece design, no warping, rusting or hardening

Reserve holes for easy installation

Dock bumper is a recoiling or resilient device that is attached to a dock in order to absorb the impact of a hit by a truck or any other transportation device. It can avoid the damage caused by truck hitting the dock, and protect the warehouse and the walls in the factory from forklifts & material handling equipment. This dock bumper in our company is made of durable rubber with good weather resistance.

Features:

- 1, suitable for outdoor or indoor protection;
- 2. Protect walls from forklifts and other material handling vehicles;
- 3. All models have pre-drilled holes for easy installation;
- 4, durable rubber material, good safety;
- 5. For commercial loading and unloading terminals, warehouses, parking lots and docks;
- 6, suitable for trailers, heavy construction equipment and other vehicles.

| Model | Length | Width | Height | Weight | colour |
|---------|--------|-------|--------|--------|--------|
